

Lab Exercise 3: Using Single-Row Functions to Customize Output

By using HR Schema in Oracle Express Edition, answer the following SQL questions.

1. Select the ID, last name combines with the first name and salary for all the employees that have ST_MAN as their job.
2. Do the SQL that displays the first 8 characters of employee's last names and indicates their salary with #. Each # represents two thousand dollars. Sort the salary in ascending order.
3. By using sub string function, find the department's name that ends with 'ng'.
4. Find the length of employees' first name that have been work more than 5 years in the company.
5. Find the number of months of working for each employee in department 80.
